

Louisiana TIMED Program Management

PB leads a program management team that is assisting the Louisiana Department of Transportation and Development (DOTD) with the accelerated delivery of the \$4 billion Transportation Infrastructure Model for Economic Development (TIMED) program of 135 highway and bridge projects. The accelerated delivery approach will complete the program as early as 20 years before expected.

The PB-led team is providing a wide range of program management services, including: design management, right-of-way acquisition and relocation, utility relocation, and construction engineering & inspection on 43 highway projects and three bridge projects (totaling approximately \$2.4 billion). It has also implemented a PB-designed software program, SCORE (Schedule, Cost, Operations, Reporting and Evaluation), which is used to track the fund availability, spending, and project status of the program. SCORE is a web-based system allowing access to all project data for the client, sub-consultants and in-house staff. PB is also responsible for the public outreach and financial management of the entire program. As part of the outreach efforts, PB planned, designed, executed and maintains the program web site (www.timedla.com), and the outreach office provides media relations, public interaction, program information dissemination and legislative monitoring.
